

The following changes should be made in the existing Statement of Mission and Functions of OSI, as set forth in Tab B:

I. MISSION

Change "is charged with the provision of that scientific and technical foreign intelligence" to "is charged with the production of that scientific foreign intelligence."

Add a qualifying clause immediately before the mission charging AD/SI "with the coordination of directly pertinent scientific and technical intelligence activities of governmental departments and agencies," the qualifying phrase to read "to the extent that this Agency may be directed by the NSC."

II. FUNCTIONS

In B., change "coordinated scientific intelligence " to "all-source scientific intelligence."

In D., eliminate the words "national" and "and technical" from the clause "recommend establishment of the national scientific and technical foreign intelligence objectives."

In E., eliminate "and technical" so that this clause requires the preparation of programs for the production of "the foreign scientific intelligence required to meet the national objectives."

Delete all of F.

In the present I. (new H., by reason of the deletion of F.), delete "agencies" and substitute "CIA offices and of such other agencies as may request such support," so that the clause reads "Support the collection activities of all CIA offices and of such other agencies as may request such support through technical assistance and guidance."
